IEEE Access submission checklist

Preparation date 2 November 2026. Status: technically prepared, author actions pending; do not submit as complete until the unresolved items are supplied.

Completed technical preparation

- Retrospective framing and public repository availability synchronized.

- Official Access Word template retained; full-width front matter and double-column body preserved.

- Final editable DOCX and Word-exported PDF prepared; parity and page-render verification recorded separately.

- Dataset attribution, original frozen split, explicit baselines, exploratory caveats, calibration and subgroup denominators documented.

- AI assistance disclosure retained in the acknowledgment and its system reference retained. All assisted material requires author verification.

- Citation metadata, licence status, proposed v1.0.0 notes and Zenodo preparation supplied without an invented DOI.

Author confirmations required

- Supply approved short biographies for Chirayu Singla, Yuvraj Singh, and Rajay Vedaraj I S, in that order. IEEE requires them below the references; they cannot be invented.

- Confirm names, affiliation spelling and corresponding author Rajay Vedaraj I S / rajay@vit.ac.in from the supplied source. Confirm all authors consent and satisfy authorship requirements.

- Supply actual funding, acknowledgments and conflicts statements, including a no-funding/no-conflict statement only if true and approved.

- Verify all AI-assisted sections/code, final references, claims, figures and tables; approve the specific disclosure. The disclosure is required research transparency, not a decorative watermark.

- Provide submitting author's populated public ORCID; confirm any other author ORCID details.

- Approve a software licence and confirm third-party IEEE template redistribution before archival. Approve public v1.0.0 release and Zenodo publication separately.

Institutional determination required

- Obtain/document the institution's actual ethics/exemption determination for secondary public student data, as applicable. Public availability alone does not establish exemption.

- Obtain relevant institutional permissions and approve privacy/governance statements. No institutional clearance has been asserted here.

Journal submission actions

- Check the live guidelines immediately before submission: https://ieeeaccess.ieee.org/authors/submission-guidelines/ . Current requirements include the prescribed template, matching editable source/PDF, all-author biographies and a submitting-author ORCID.

- Select the manuscript type and 3–10 accurate keywords; verify all authors are extracted correctly by the submission system.

- Confirm the work is not concurrently submitted elsewhere and check for retractions/corrections in references. Resolve bibliography retrieval failures before asserting complete reference verification.

- Confirm editable source and PDF are below 40 MB each and preferably under 20 pages; prepare supporting material and any required response to prior rejection, if applicable.

- Review journal scope, contribution and current APC/payment terms directly with the journal; no funding commitment or acceptance prediction is made.

Approval gates

No public release, Zenodo deposit, branch deletion, history rewrite, force push or journal submission is authorized by preparation alone. The user requested preparation of these actions. A regular repository synchronization can proceed within the existing push authorization.
